Test Plan

Objective

The objective is checking the results of the test run for errors or information about the program's non-functional attributes by executing the program that was implemented.

What to test and how.

We intend to test UC1("Start Game") and UC2("Play Game") by writing and running dynamic manual test-cases. We also write automated unit tests for `isContains()`, `selectionSort()` and `isExist()` methods. Finally we examine the code by static inspection to see how we can fix the errors.

Time plan

Task	Estimated	Actual
Planning the Assignment	30m	1h
Manual Test Cases	2h	3h
Running manual tests	20m	5m
Unit Test	2h	3h
Test Report	1h	2h

Manual Test Cases

TC1.1 Register and Start game

Use case: UC1("Start Game")

Scenario: The main scenario of UC1 is tested where the user registers by writing a new username and password correctly and logs the game(perfect scenario)

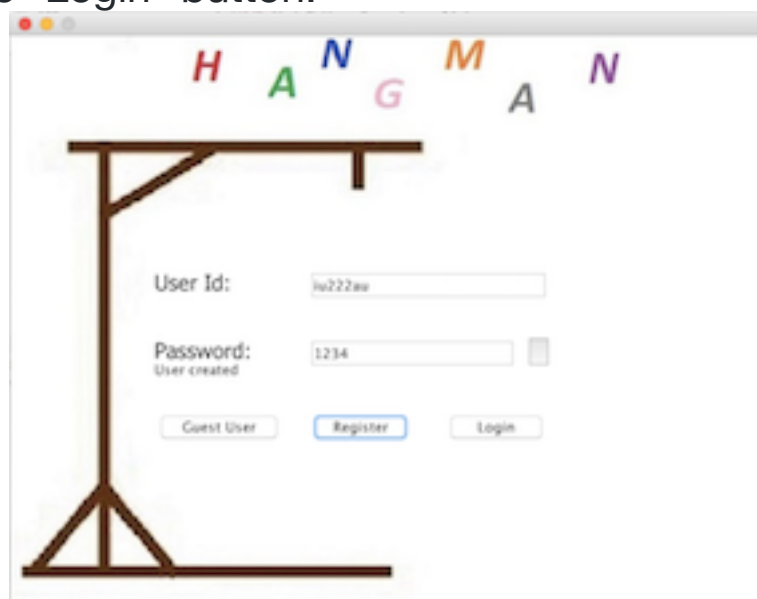

Precondition: There must NOT be a username which is like "iu222au" in the DataSet.txt file.

Test steps

- Start the app
- Enter "iu222au" as username and "1234" as password.
- Press "Register" button
- Press "Login" button

Expected

- The system shows "User created" and user got ability to click the "Login" button.

TC1.2 Can not Register because of Same Username

Use case: UC1("Start Game")

Scenario: User enters a username that is already exist and can not register to game.

Precondition: There must be a username "iu222au" in the DataSet.txt file.

Test steps

- Start the app
- Enter "iu222au" as username and "5678" as password.
- Press "Register" button
- Press "Login" button

Expected

- The system shows a message: "This user already exist!" and waits for new username and password

TC1.3 Can not Login because of Wrong Password

Use case: UC1("Start Game")

Scenario: User enters a username and password but can not login game because of the wrong password.

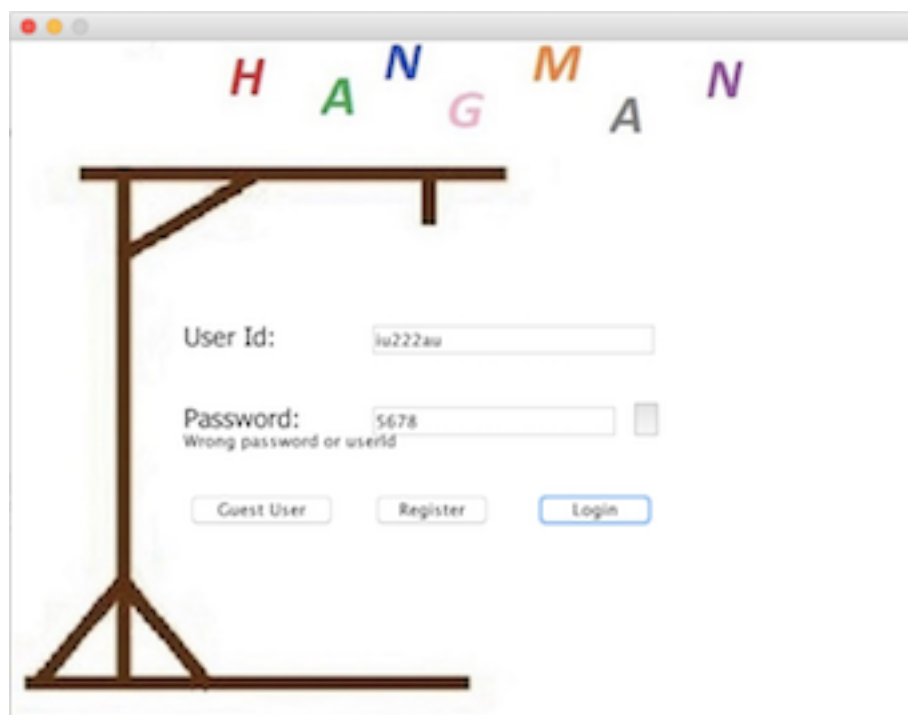

Precondition: There must be a username "iu222au" with password "1234".

Test steps

- Start the app
- Enter "iu222au" as username and "5678" as password.
- Press "Login" button

Expected

- The system shows a message: "Wrong password or userId" and waits for correct username and password

Note: The word is set as "classic" for the test case
TC2.1 Play game and Win

Use case: UC2("Play Game")

Scenario: The main scenario of UC2 is tested where the user plays the game, guesses every letters correctly and wins the game.(perfect scenario)

Precondition:UC1

Test steps

- Press the button "Play Game"
- Press the button 'c'
- Press the button 'l'
- Press the button 'a'
- Press the button 's'
- Press the button 'i'
-

Expected

- The system shows "You Win" and displays a new button "Next" and the time continues to flow for next word.

TC2.2 Play game and Loose with no guess chance

Use case: UC2("Play Game")

Scenario: The user plays the game, guesses letters wrongly and there is no chance to guess a word and lost game.

Precondition:UC1

Test steps

- Press the button "Play Game"
- Press the button 'b'
- Press the button 'd'
- Press the button 'e'
- Press the button 'f'
- Press the button 'g'
- Press the button 'h'
- Press the button 'j'
- Press the button 'k'

Expected

- The system shows "Game Over", "time : 0" , "left : 0" and "score: ".
- Displays a new button "New Game" and the true word.
- The system shows the hanged man.

Test Report

Test	UC1	UC2
TC1.1	1/OK	0
TC1.2	1/OK	0
TC1.3	1/OK	0
TC2.1	0	1/OK
TC.2.2	0	1/OK
COVERAGE & SUCCESS	3/OK	2/OK

Unit Test

Reflection

It was little bit difficult to planning the test. Because it was my first time writing a manual test and it is hard to predict the time of something that you do not know anything about.

For manual test, it took a bit time at the beginning. But after i learnt about it, it was easy to implement and fun. the Greeter example was so helpful for that. And also was fun to could take screenshots from the results.

Because of the fact that i did not know how to test the GUI, learning the automated test and finding separate methods were also difficult for me. I tried details and tested them.

After all, this part of the assignment was so instructive and even if i spent lots of time to learn something, i like what i learnt and i think they are so useful to realize the details.
